

Flexible UV-resistant cable protection

UV-protection up to 40 years

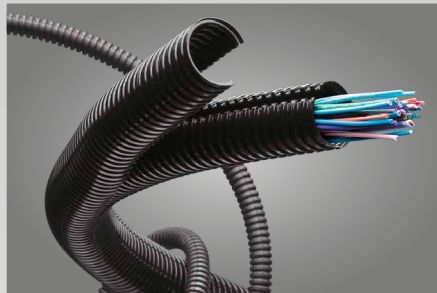

Reliably protecting cables and wires is essential for outdoor applications due to exposure to e. g. UV radiation, weather, mechanical loads, but also rodent bites and insects. The flexible and weather-resistant corrugated FIPSYSTEMS tube systems provide complete protection of wires and cables, because a number of different products ensures that exactly the product is used that has been designed for the particular purpose to guarantee smooth operation of your solar and photovoltaic panels.
